Mainboard Replacement Tool
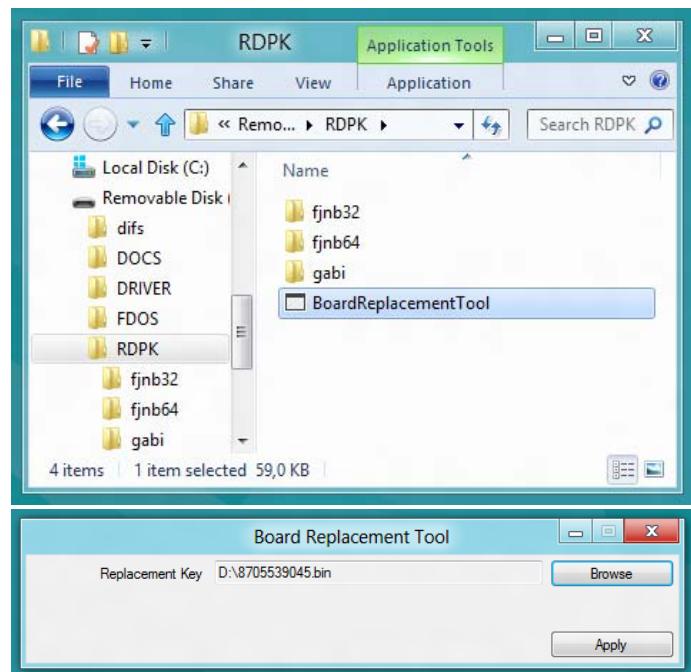

Use the Tool to write Replacement Digital Product Keys (RDPK) into replaced mainboards.

This tool requires the .NET framework 4.5, which is included as part of Windows 8.

Insert your USB drive and navigate to
`RDPK`.

Start `BoardReplacementTool.exe`.

Click `Browse` to select your RDPK file. By
default, the file extension is `*.bin`.

Click `Apply` to copy the replacement key
to the board.

Board Replacement Tool will detect the system type
(Notebook/Desktop, 32/64 bit) and take the appropriate steps
to write the key.
