Dear Customer,

You recently purchased a PRIMERGY server with the VMware ESXi Embedded Hypervisor.
Please note that this server starts from an internal USB port as a factory default start option.
When any maintenance work is performed, such as changing the motherboard or resetting the BIOS default values, you must change the boot sequence manually in the BIOS setup menu.
Please refer to the BIOS manual for information about the steps that need to be taken and ensure that the USB device is handled as the first boot device.

If there is any need to reinstall the native boot image on a USB device (e.g. in case the USB device is empty), please use the Recovery Tools CD. This CD is attached to this delivery.

Your USB device is pre-installed with VMware ESXi 5.x.
The licence key for ESXi 5.x Hypervisor is:

H50AG-00L81-08289-0428H-34J4C

This key must not (and cannot) be activated in the VMware License Portal.

If you have a valid vSphere License you will not need the ESXi Single Server key. vSphere License are managed with the VMware License Service.

Corresponding ESXi Embedded documentation can be found under:
http://www.vmware.com/support/pubs/vsphere-esxi-vcenter-server-pubs.html

Actual ESXi Image can also be downloaded from:
http://www.fujitsu.com/fts/support/

Host / Konfiguration / Software / Lizensierte Funktionen

Best regards
Fujitsu
